**Subject:** Cranes & Training

I am aware that there is a new committee recently set up to re-evaluate the crane standard. I would like to propose that the committee please review the various state regulations in building their standard revision suggestions. I have recently downloaded the North Carolina Safety Policy and Procedure from the internet (Cranes SPP#1910.179 - March 1996: Rev 1). It covers a great deal of information that may assist in establishing a baseline from which to build. As I was not aware of how to get this suggestion to that group, and I have contacted your group regarding training issues, I was hoping that you could please forward this to that committee.

Thank you in advance,
