

## Crane Power Line Safety Organization

Members of C29 Committee

10 June 2004

Gentlemen,

Thank you for your kind reception at the American National Standards C29 committee in Denver and trust that the rest of the IEEE conference went well.

As leading manufacturers and key personnel in the substantial insulator industry you would find the development of your existing products an easy step to crane applications. There are an estimated 2000 new construction cranes per year and 20,000 existing cranes in US alone. Other market segments include foundry and munitions.

Our aims are to increase competition and choice in a new and growing market using your existing high voltage expertise to produce reliable products to save lives.

Following the interest shown and in order to fast track you into these market segments one member company, InsulatUS Inc., is willing to provide you with a licence to use some of its technology. Please contact me for further details.

May I encourage you to join our organisation? Please visit our web site [www.cranepowerlinesafety.org](http://www.cranepowerlinesafety.org) and if the aims match your companies we will supply you with a copy of the constitution.

Yours truly,

Hugh Pratt  
Chairman of Crane Power Line Safety Organisation  
IEEE member
